

I have attached my Bookstore project context. I currently have a working CRUD for Books. I need to implement a similar CRUD for Electronics. I would also need to implement the entity, controller, and repository for Electronics.

Create an `Electronics.jsx` component that displays name, price, stock, brand, and category. It should support Delete and Update.

Create an `ElectronicsForm.jsx` that handles the specific fields for an Electronic item (name, price, stock, brand, category).

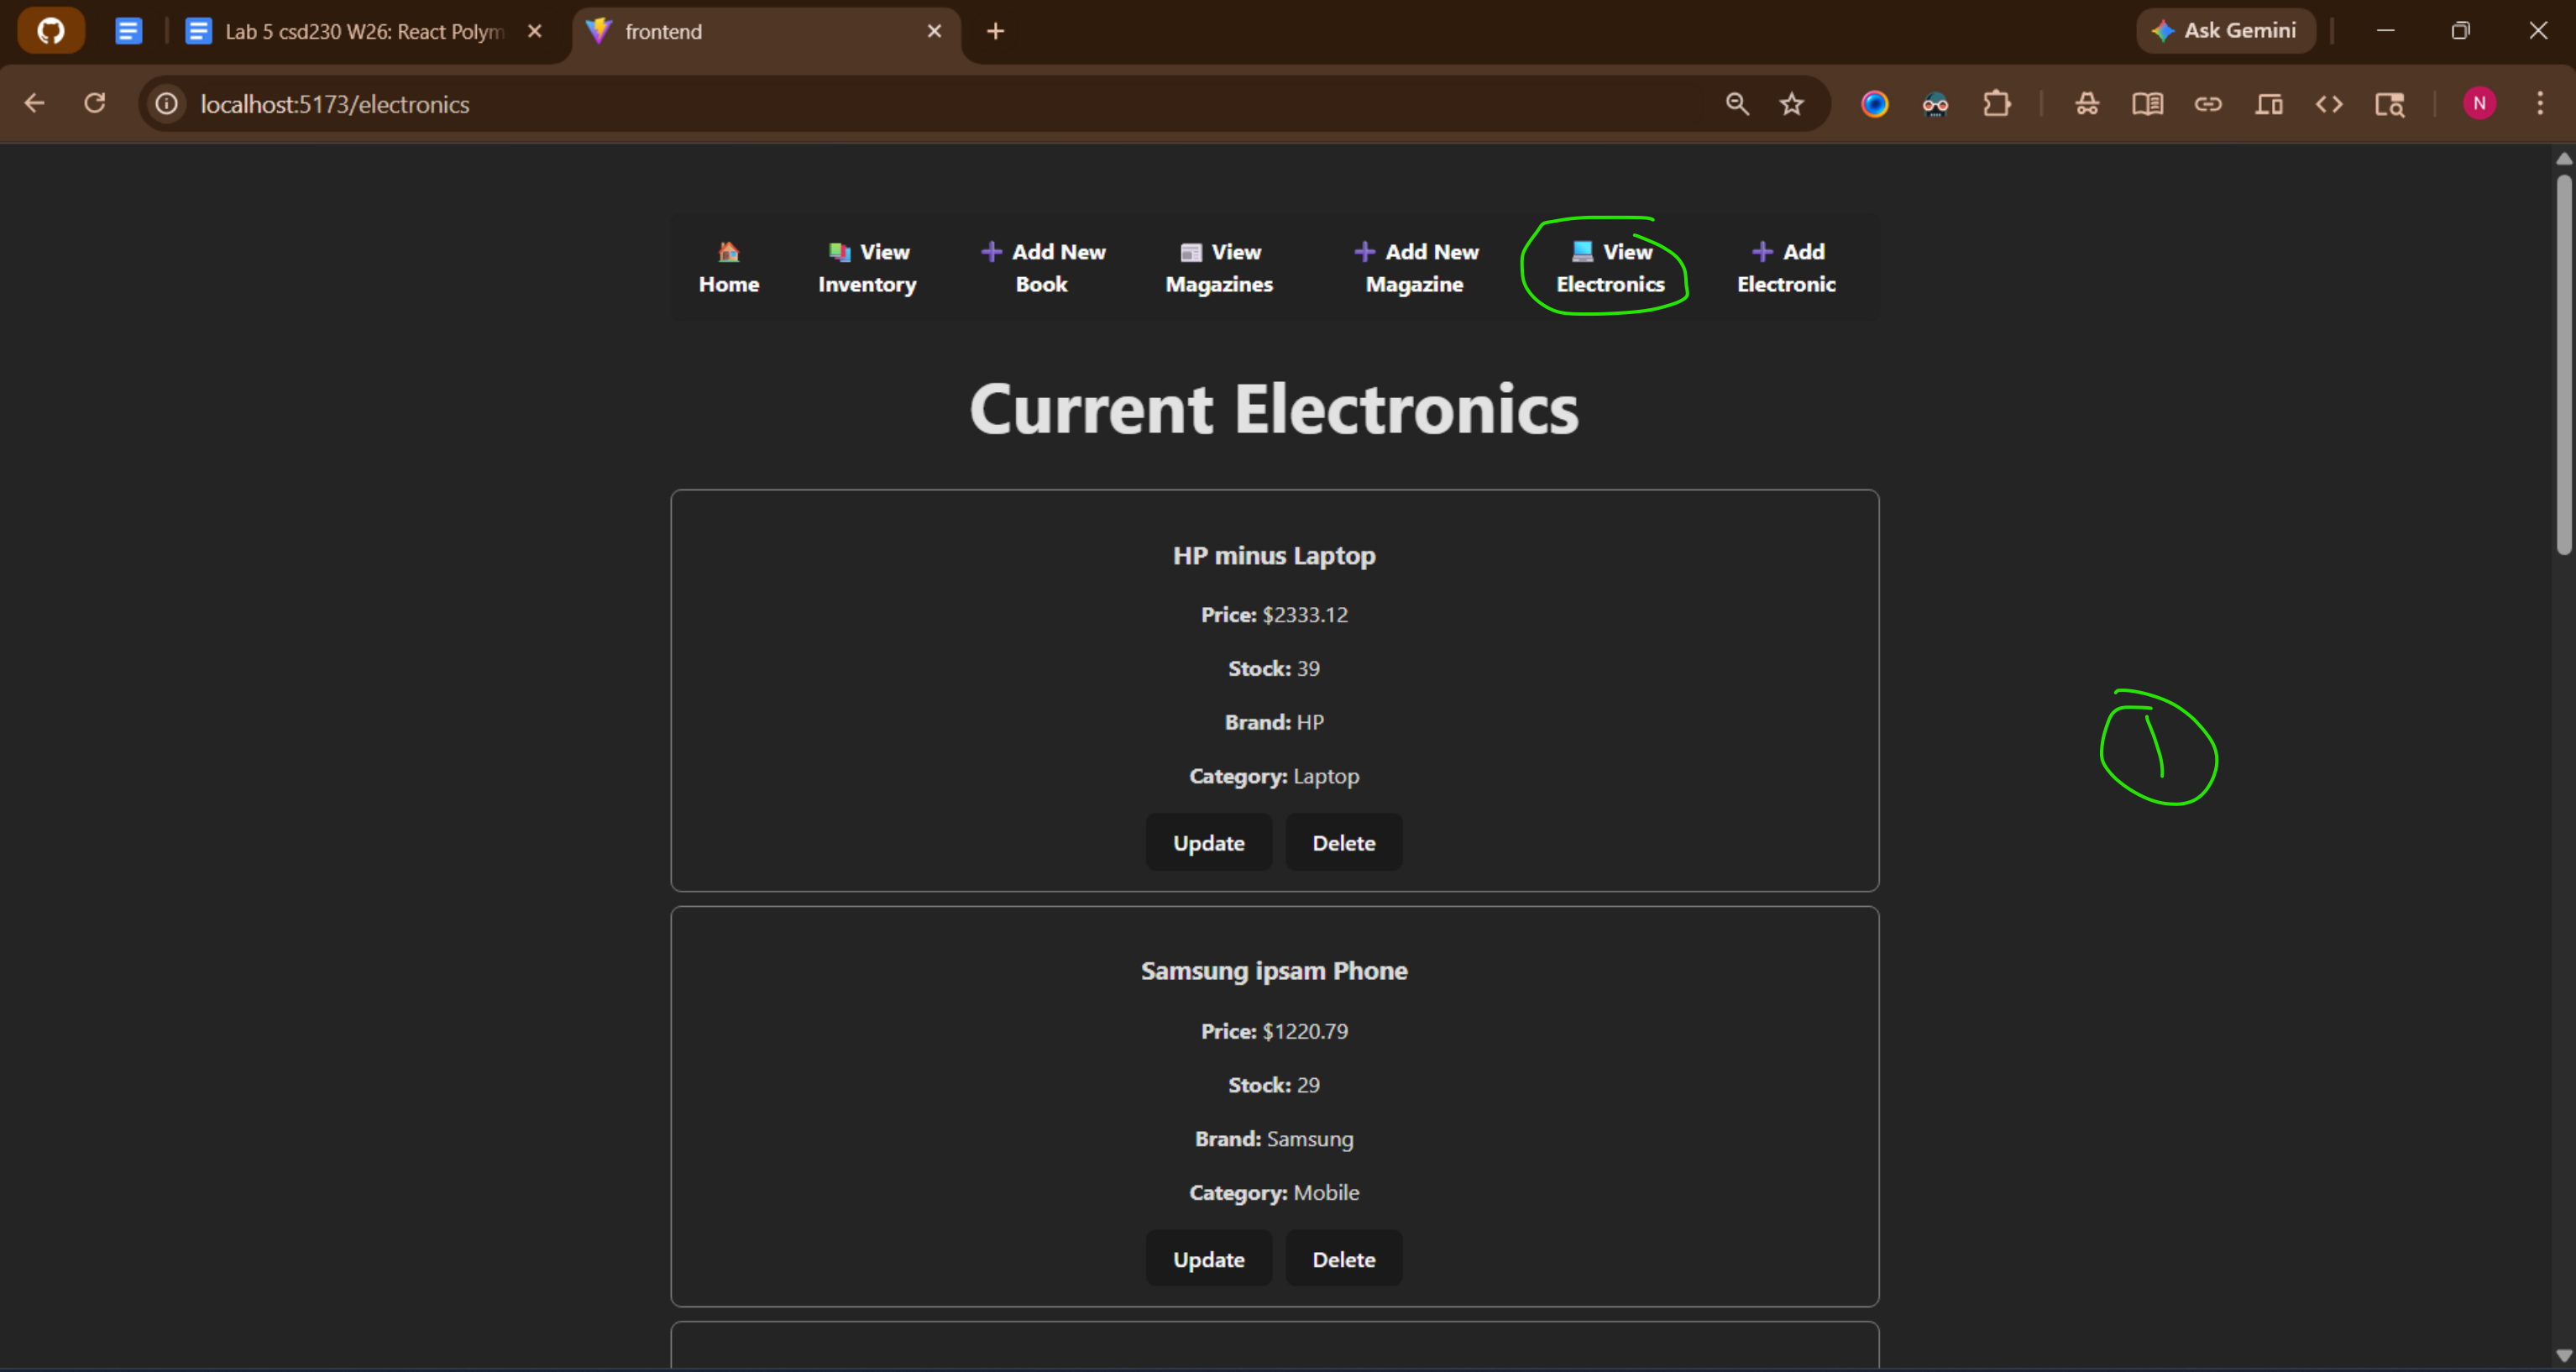

Update `App.jsx` to include an `electronics` state and fetch data from `/api/electronics`.

Update the Routing in `App.jsx` so that `/electronics` shows the list and `/add-electronic` shows the form.

Update `Navbar.jsx` to include links for these new routes.

Match the existing styling and logic patterns (Fetch API, Spread Operator, etc.) exactly.

Ensure it handles the category field correctly.
